

ABSTRACT OF THE DISCLOSURE

In a digital broadcasting receiving apparatus accommodating a DVD playback apparatus, an HD apparatus, and a tuner apparatus for receiving digital broadcasting signals, a decoder forms an image based on digital information supplied from any of these apparatuses. The formed image is output to a monitor apparatus connected externally, with an image showing related information interposed thereon. The image of related information is output in a manner allowing the interposing image based on digital information to be visually recognized, by the adjustment of parameters of the graphic data.
